

## **VERONICA GIGLIO**

### **Pediatric Research Nurse**

Dr. Veronica Giglio is a pediatric nurse graduated with 110 cum laude and continues her studies at the University of Naples "Federico II", Naples, Italy.

It is part of the Pediatric Allergy Program at the Department of Translational Medical Sciences of the Federico II University of Naples.

Dr. V. Giglio has focused her research activity on food sciences, on the basis of interdisciplinary research and a highly integrated clinical research program to better understand the pathogenic mechanisms of food-induced diseases and provide better assistance to children suffering from these ailments. Her research activity is based on the study of the basic aspects of the pathophysiological bases of food-induced pediatric diseases, of the epigenetic biomarkers involved in IgE and non-IgE food allergy, of the structure of the intestinal microbiota and functional analysis. The main objective of the research activity is focused on the identification of the best strategies for the management of pediatric patients with food allergies and food intolerances and for the identification of innovative strategies to induce immune tolerance in children with allergies food.
